## **COURSE DESCRIPTION**

This course examines policy implementation as a political process shaped by power, institutions, organized interests, and social groups. It explores how states build capacity and deliver policies, how bureaucracies perform, how citizens experience government, and how those experiences feed back into politics and public policy. A central theme is decision-making. We analyze how politicians, bureaucrats, and citizens make choices based on their institutional environments, objectives, information, incentives, and constraints. Because research on the politics of public policy is interdisciplinary, we read both foundational and cutting-edge work from political science, economics, sociology, public law, and public administration.

The course also intentionally exposes students to a wide range of cases. It primarily engages American politics and public policy, but also examines European, Latin American, South Asian, and East Asian cases because, as Seymour M. Lipset (1922-2006) noted, “a person who knows only one country knows no countries.” Substantively, we cover a wide range of policy domains, including safety net programs, criminal justice, housing, and international development, with topics ranging from how state institutions have historically evolved to how to make government use of artificial intelligence more accountable.

The course's readings, in-class activities, and assignments are designed to help students understand that normative, theoretical, empirical, methodological, and practical elements are all essential for producing research, generating evidence, and improving practice in this area.

It equips students to grasp the political dimensions of policy implementation and to analyze institutional terrain, organizational challenges, key actors, and strategic choices. It also helps students design policy innovations that encounter less resistance, build broader coalitions, and not only get adopted, but also sustain and scale.
