Book projects

1. "Unseen and Uncounted: How Bureaucracy and Community Organizing Made New Racial Groups in America." (based on award-winning dissertation)

   Interviewed by Scope Conditions Podcast
   Winner of the 2022 Best Dissertation Award, Urban and Local Politics, APSA
   Winner of the 2020 Best Paper Award, Asian Pacific American Politics, WPSA

   Unseen and Uncounted develops a new theory of racial group formation centered on the concept of classification cost—the administrative difficulty of recognizing small, fragmented, or poorly understood populations. During the War on Poverty, ambitious new safety net programs were implemented through federal categories that often excluded nonwhite immigrant communities, particularly those from Asia and Latin America. This exclusion was consequential because these coarse administrative categories influenced how the target populations of these programs were defined and how critical resources were allocated. In response, certain ethnic elites engaged in political innovation. They introduced new panethnic labels, built cross-ethnic coalitions, and founded civic organizations to reduce classification costs and make their communities legible to the state. These bottom-up efforts reduced classification costs for local government agencies and reshaped how race was codified in public policy and administration. Over time, these strategies influenced federal classification schemes and institutionalized panethnic categories such as "Asian American" and "Latino." Drawing on original data from both local administrators and community organizers, the book traces the evolution of policies governing diverse low-income populations at the subnational, national, and transnational levels during the postwar period of American political development. Governing diversity pushes the limits of state capacity because it requires more and better information. When obtaining such information is difficult, one option is to borrow informational capacity from communities. Even in the era of artificial intelligence, this challenge persists and the solution remains relevant. No matter how powerful the machines embedded in government become, the ground truth is on the ground, among the people the state aims to serve.
